

For What You Build Next

If you're reading this, it means everything is now in your hands.
That's a good thing.

This guide is here so you can run and manage your website entirely on your own calmly, confidently, and without needing to depend on anyone. You're more than capable of doing this yourself.

There's a short video attached in the mail.
It shows you everything up until importing the ZIP file and telling the agent to run it.

Once the video ends, just continue with the section called **"After the Video"** below.

Take your time with this.
You'll figure it out, I know you will. 

After the Video

Once you've followed everything shown in the video and the site is running, the rest is simple.

You're basically just making it live on your own domain now.

Take a breath you're already past the hardest part. ✨

Publish the Website

1. Look at the **top right** of your Replit screen

2. Press **Publish**
3. Wait a moment while it deploys

Once publishing finishes, your site is live on a temporary link.
Now let's connect it to your actual domain.

Connect Your Own Domain

1. Click **Connect your own domain**
2. Enter:
manzartherapy.com
3. Continue

Replit will now show you a few **DNS records**.
Keep this page open you'll need those values.

Go to GoDaddy

1. Log into your **GoDaddy** account
2. Go to **My Products**
3. Find **manzartherapy.com**
4. Click **DNS**

Now update the records exactly as Replit showed:

For the main domain

- Type: **A**
- Name: **@**
- Value: (IP address shown in Replit)
- Save

For www

- Type: **TXT**
- Value: (value shown in Replit)

- Save

Once saved, that part is done.

Come Back to Replit

After updating DNS:

1. Return to the Replit tab
2. Click **Verify**

Give it a minute or two.

Once verified, your domain will connect.

And that's it

Your website will now be live at:

<https://manzartherapy.com>

Fully yours. Fully independent.

Running quietly in the world, doing what it was meant to do.

You did all of this yourself.

Proud of you.
